

CS6329.001: Project Deliverable – 2

Due Date: Sunday, February 28, at midnight

Description: For this deliverable you will be responsible for developing the domain model and outlining a supplementary specification for the project. Base the domain model on the use cases you submitted in the first deliverable. The supplementary specification usually contains any nonfunctional requirements; a simple document that captures any extra requirements you can think of will suffice .

Items to be delivered: The items you will deliver in this deliverable are:

1. Updated use cases, only if the TA has provided feedback
2. Domain Diagram for the problem space
3. Supplementary specification for this project.
