CS6329.001: Project Deliverable – 3

Due Date: Sunday, March 13, at midnight

Description: For this deliverable you will be responsible for developing the SSDs (System Sequence Diagrams) and Operations Contracts for the system you are designing. Use the examples from the book – remember, you need to name all of the system events/operations that you can identify from the use cases, and then create operation s contracts for each one. The Ops Contracts should identify what changes occur to Domain Model entities after a system event .

Items to be delivered: The items you will deliver in this deliverable are:

1. Updated domain model, only if the TA has provided feedback
2. System Sequence Diagram (SSD) – if you only have a few system operations, you only need to create one diagram
3. Operations contracts for the system events you have identified.
